

Project: Fitness Data Analysis

Description:

As part of my learning in data analysis & visualization, I performed an exploratory analysis on fitness tracker data to understand user health behaviors and trends. The dataset included daily activity metrics such as steps, calories, sleep, and activity intensity.

Key steps:

- **Data Cleaning & Preparation:** Handled missing values and ensured data quality for reliable analysis.
- **Exploratory Analysis:** Investigated patterns between sleep duration, physical activity levels, and calories burned using visuals.
- **Tools Used:** Python, Pandas, Matplotlib, Seaborn
