

Project: Employee Productivity, Engagement, and Sales Dashboard

Type: Study Project

Overview:

Designed an interactive dashboard to analyze employee productivity, engagement, and sales performance as a hands-on learning project. The dashboard presents an analysis ranging from company-wide insights to individual performance metrics.

Data Model:

- **Calendar Table:** Supports time-based filtering and trend analysis.
- **Employee Table:** Contains employee profiles, roles, departments.
- **Engagement Table:** Tracks engagement activities, feedback, and participation metrics.
- **Task Table:** Records task assignments, status, completion time, and productivity indicators.

Dashboard Pages:

- **Executive Overview:** Summarizes key metrics such as Total Employees, Total task, engagement score, task completion rate by role and department, and trends in daily completion task.
- **Department & Role Performance Overview:** Compares productivity and engagement across departments and roles.
- **Individual Performance:** Provides a detailed view of each employee's performance, task history, and engagement participation, etc.

Technologies Used: Power BI

Learning Outcome:

Gained practical experience in building a star schema data model, implementing DAX, and interactive visuals.
